Clean Room Training Test:

NAME:____________________________   DATE:________________

1) How does a clean room work?

2) What practices can you perform to help maintain laminar flow in the clean room?

3) Describe where the cleanest and dirtiest parts of the clean room are located.

4) Why do you use scissors to open a sealed bag or separate a piece of cloth? (As opposed to ripping)

5) List a few tools that you can and cannot bring into the clean room

6) Describe a process for taking items into and out of the clean room

7) Describe the order and process for the gowning prior to entering the clean room with a tad bit of emphasis on the gloves (this is the important question)
T/F questions:

______: It is a good practice to remove your cell phone prior gowning to ensure that you’re not tempted to reach into your clothing pocket if it rings.

______: It is good practice (when applicable) to direct the air of a sneeze into your arm-pit.

______: Our training today followed US FED-STD-209E, (ISO 7) and you are now qualified to use the same practices in other clean rooms which follow this standard.

FYI, here is a growing list of things not mentioned during the training (in the video)

1) THE ANTI-ROOM TABLE IS GLOVES ONLY, DO NOT TOUCH THE TOOLS OR STATMAT WITHOUT USING GLOVES
2) NO Pencils in the clean room! Pencils particulate like crazy. We have special clean room pens on order.
3) We have clean room paper for note taking (to be handled with gloves)
   a. It is acceptable (if following a procedure) to have a separate person in the clean room using standard paper (as long as they remain in a “dirty” part of the clean room.
4) There will be a sign-in log in the clean room
